June 2021

The International Union of Physiological Sciences (IUPS) is a Not-for-Profit collective of physiological societies, founded in 1953. https://www.iups.org/iups/

It is the only organization to represent worldwide physiology. It gives physiologists a global voice and facilitates meetings and transnational initiatives. IUPS especially supports young scientists, for example by offering travel awards to international meetings.

IUPS has a 60-strong membership from national societies, across all continents. It works to champion physiology without borders and to remove political barriers from physiologists interacting.

To celebrate and publicize the important contributions made by physiologists to science and health, the IUPS Academy of Physiology was established in 2021.
